

Tufte-Oriented Revision Proposal for APA-UK007 Shipment Presentation

This proposal covers

`ukapa7_shipment_storage_presentation.md`. It treats Edward Tufte's principles as practical constraints for the deck: show comparisons directly, reduce non-data ink, make uncertainty and coverage visible, and place words next to the evidence they explain.

Presentation Diagnosis

- The current deck states the conclusion before showing enough evidence for the audience to reconstruct it.
- Important caveats, especially U-layer partial coverage and different access geometry, appear as bullets rather than visible constraints on the figures.
